SUPERSTORE SALES & FINANCIAL PERFORMANCE DASHBOARD

Interactive Business Dashboard using Microsoft Power BI

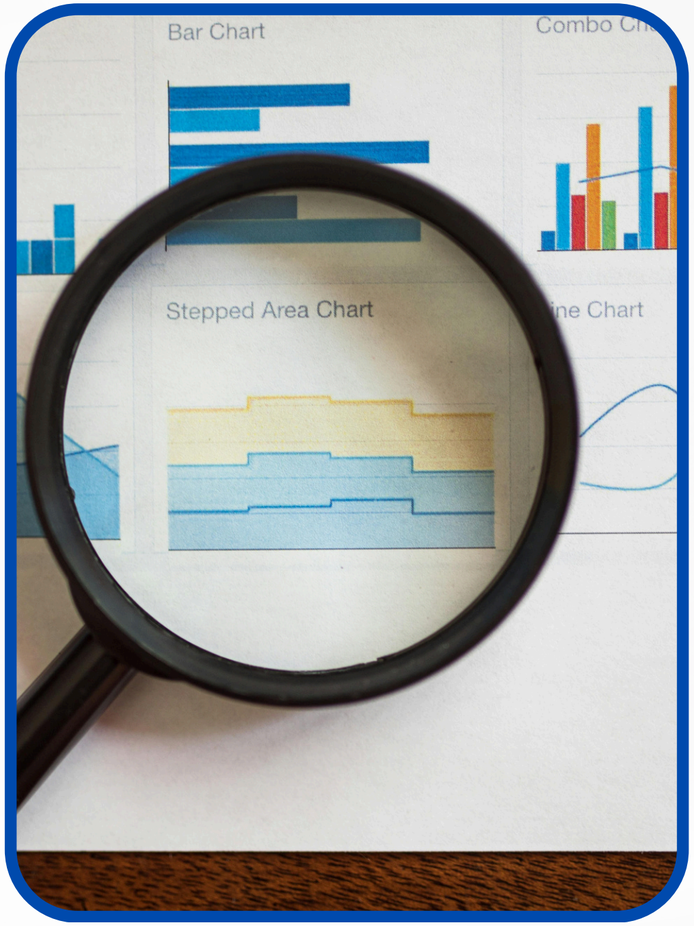

Presented by: C.Keerthana

INTRODUCTION

The Superstore Sales Dashboard is an interactive business intelligence solution developed using Microsoft Power BI.

OBJECTIVES:

- Analyse overall sales and profit performance.
- Identify top-performing products and categories.
- Understand customer purchasing behaviour.
- Compare sales across different regions.
- Support better business decision-making through data visualisation.

KEY DATASET ATTRIBUTES

Attribute	Description
Order ID	Unique order identification
Order Date	Date of purchase
Sales	Revenue generated
Profit	Profit earned
Quantity	Number of products sold
Category	Product category
Region	Geographical sales region
Segment	Customer classification

DATASET DESCRIPTION

The project uses the Superstore Sales Dataset obtained from Kaggle. It contains business transaction details related to sales, profit, products, customers and geographical regions.

TOOLS & TECHNOLOGIES

1. MICROSOFT POWER BI

- Used to create the interactive dashboard.
- Developed charts, graphs and KPI cards.
- Presented business data through visualisations.

2. DATA VISUALISATION

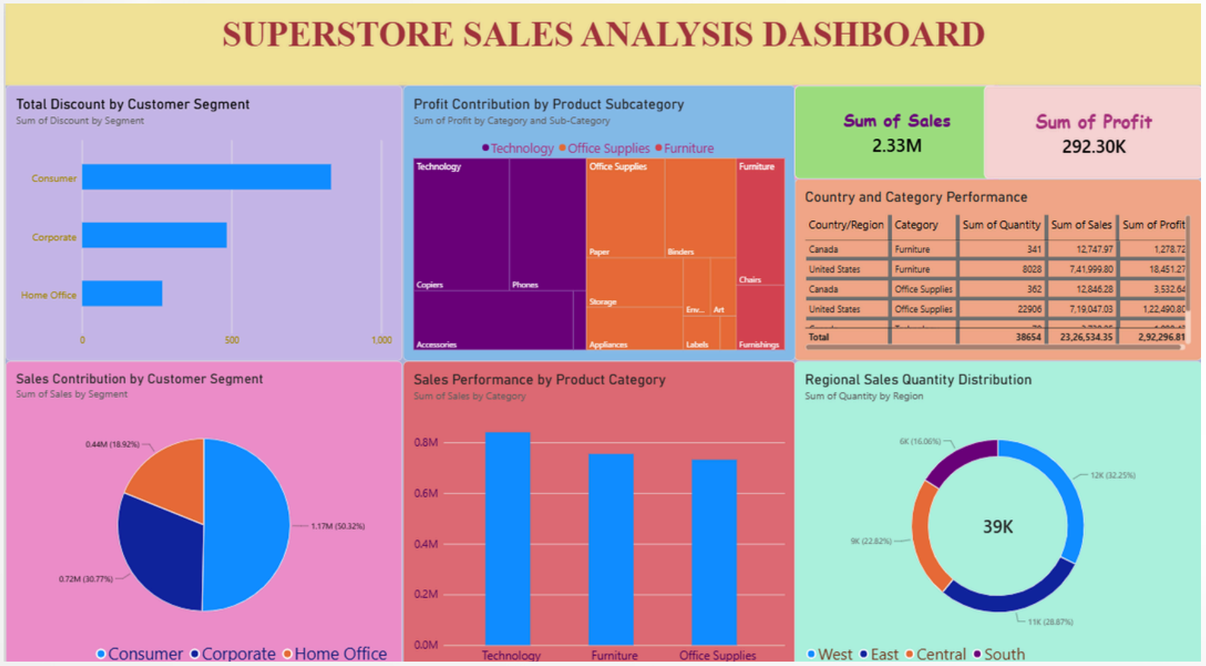

- Bar Chart
- Pie Chart
- Doughnut Chart
- Treemap
- KPI Cards and Tables

3. DATASET SOURCE

- Kaggle – Superstore Sales Dataset

DASHBOARD OVERVIEW

The Superstore Sales Analysis Dashboard provides an interactive visual representation of business performance using Microsoft Power BI

KEY DASHBOARD COMPONENTS

1.Sales & Profit KPI Cards – Display total sales and profit.

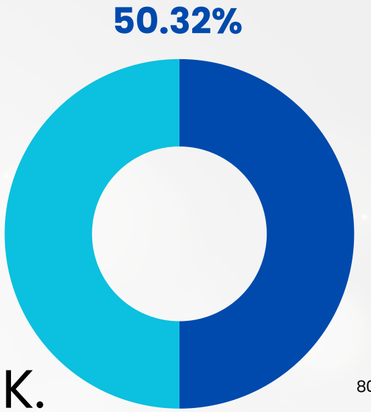

2.Customer Segment Analysis – Shows sales and discount contribution.

3.Product Performance – Displays category-wise sales and subcategory-wise profit.

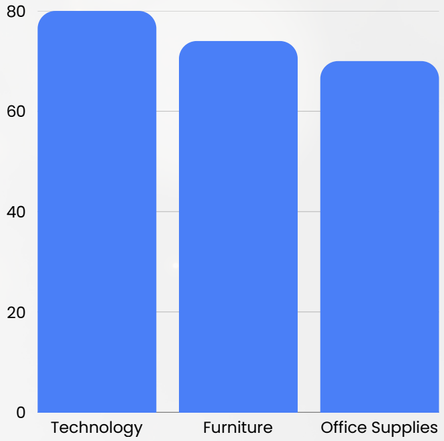

4.Country Performance – Compares sales, quantity and profit.

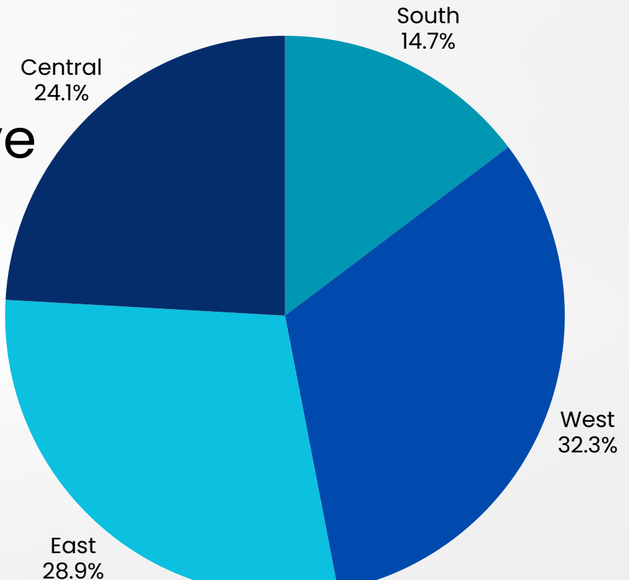

5.Regional Analysis – Shows quantity distribution across regions.

KEY BUSINESS INSIGHTS

1.Overall Performance: Total Sales – 2.33M; Total Profit – 292.30K.
2.Customer Insights: Consumer segment contributes the highest sales (50.32%).
3.Category Insights: Technology has the highest sales (approximately 0.8M).
4.Regional Insights: West region contributes the highest quantity (32.25%).
5.Business Recommendation: Focus on high-performing customer segments, product categories and regions to improve business performance.

CONCLUSION

- The dashboard converts raw business data into meaningful insights.
- It helps monitor overall sales and profitability.
- It identifies customer segments and top-performing product categories.
- It compares sales distribution across different regions.
- It supports better business decision-making through data visualisation.

THANK YOU!
